

Energy optimization

With the increased popularity of renewable energy sources and the fragmentation of the supply chains of traditional primary energy carriers, the Hungarian energy market is **becoming more and more complex and unpredictable.**

Exacerbated by climate change and geopolitical conflicts, supply and demand conditions showing large fluctuations make the development of prices available on the market uncertain, so **the exposure of domestic businesses and institutions to changing energy prices**

has become a serious, everyday problem in terms of maintaining the competitiveness of businesses and the operation of institutions.

Our company, TN Energy Kft., has energy and electrical engineering competences proven by **practical references**, and with its purchasing experience and direct supplier relationships, it can support its customers in the identification, selection and implementation of cost-effective energy efficiency projects that **enable the best use of the limited financial resources available for this purpose.**

Complete energy audit service

In our personalised service, we pay particular attention to fully understand your specific situation and energy use conditions in order to propose the most optimal energy solution. During the audit, our experts will assess the possible development of production capacity and the most efficient energy storage solutions.

Energy optimisation design

As energy storage technology continues to evolve rapidly, new opportunities are opening up for individuals and businesses to store energy in increasingly optimal, scalable ways. Our expert team designs efficient energy generation and storage systems based on the needs and opportunities that arise.

Energy trade planning and management

Based on the experience and schedule of the audit and optimisation plan, our team of experts will assist you not only in the procurement of products and the construction of the energy storage system, but also in the operation and energy trading part of the completed, operational structure. With our own balance sheet and trading rights, our team can deliver energy more cost-effectively than average market conditions.

Maintenance and warranty service

A comprehensive energy service portfolio cannot exist without monitoring our products and services throughout their entire lifecycle. Our experts continuously provide assistance both in relation to maintenance and service needs; and continuous energy optimization.
